ABOUT ME

Full Stack Developer with 1 year of experience building and shipping production web apps — from an e-commerce platform with inventory and affiliate systems to secure payment flows. Core toolkit: React.js, Node.js, and Supabase, with Next.js for dashboard/admin interfaces, plus hands-on work across REST APIs, PostgreSQL/MongoDB, and integrations like Razorpay and Figma-to-UI workflows. Focused on writing maintainable code, owning features end-to-end, and building interfaces that hold up under real user load. Comfortable working in fast-paced startup environments and picking up new tools quickly.

WORK EXPERIENCE

Associate Software Developer — Dexop Gadget Pvt. Ltd.

Oct 2025 – Sep 2026

www.chotubot.com

- Built the www.chotubot.com website in React.js and Node.js, translating Figma designs into responsive components; built the Order & Shipping Management Dashboard in Next.js, including international shipping, currency conversion, and order tracking.
- Developed inventory management (stock tracking, catalog updates) and an affiliate marketing system with referral tracking and commission calculation.
- Integrated Razorpay payments with verification and webhook handling; built backend REST APIs for orders, payments, and customer management.
- Implemented secure authentication and role-based authorization (RLS) using Supabase, and automated transactional/promotional emails.
- Managed sprints and task tracking with Jira Kanban boards, and deployments via GitLab CI/CD.

Full Stack Developer Intern — SASH Info Pvt. Ltd.

Jul 2025 – Oct 2025

sashinfo.com | eductrl.com | clientctrl.app

- Contributed to DocuSign, a document signing platform — built secure document upload, drag-and-drop signatures, OTP/email verification, and a credit system.
- Developed and tested REST APIs (Next.js, Postman); implemented IP/device tracking, real-time status updates, and role-based access.
- Improved UI/UX with Next.js, React, Bootstrap, and Redux, using Git/GitHub for version control.

PROJECTS

Blog Management Feature — AppyMinds.com

Feb 2025 – Mar 2025

- Built a complete blog management admin panel with secure JWT login, role-based access, and full CRUD (image upload, categories, SEO/meta fields), using MongoDB to store and manage blog content.
- Integrated a full HTML editor (CKEditor) with slug auto-generation and featured image validation.
- Added dynamic blog listing with search, filters, pagination, and publish/unpublish controls.
- Connected the admin panel with the live AppyMinds website to display published blogs in real time.

DocuSign — Digital Document Signing Platform

Jul 2025 – Oct 2025

Tech: Next.js, React.js, MongoDB, Redux, Bootstrap, NextAuth

- Built secure document upload, drag-and-drop signature placement, and OTP/email verification with a credit-based usage system.
- Added real-time status tracking, IP/device capture, and activity logs; integrated with AppyMinds LMS for a seamless document flow.
